ABERDEEN AND HAVRE DE GRACE HIGH SCHOOLS CELEBRATE NMSI ADVANCED PLACEMENT INITIATIVE LAUNCH

Two Harford County high schools net AP grant award opportunity to benefit military families

A celebratory kick-off event for Aberdeen and Havre de Grace high schools held today at the Harford County Public Schools A.A. Roberty Building marked the launch of the National Mathematics and Science Initiative (NMSI) Initiative for Military Families (IMF) program expansion in Maryland. NMSI National Director of the Advanced Placement Training and Incentive Program (APTIP) Gregg Fleisher, Principal Assistant Director for National Security and International Affairs at the White House Office of Science and Technology Policy Arun A. Seraphin, Director of the Department of Defense Education Activity (DoDEA) Marilee Fitzgerald, Aberdeen Proving Ground (APG) Major General Robert Ferrell, Board of Education of Harford County President Leonard Wheeler, Superintendent of Schools Robert Tomback, representatives from The Boeing Company, among many other school system employees and Aberdeen and Havre de Grace high schools students and staff, were on site to celebrate the event.

Serving over 350 military families alone, Aberdeen and Havre de Grace high schools educate and inspire many students that have one or both parents serving in the military. Many of those students may experience the hardship of having at least one parent deployed overseas. The IMF provides college-level coursework in science, math, and English for students of military families. While it is the goal of the IMF to provide excellence and continuity for students whenever and wherever their military families are transferred, all students in participating schools may benefit from the program.

The grant funding, provided by Boeing for Aberdeen High School and DoDEA for Havre de Grace High School, will provide NMSI’s highly-successful Advanced Placement Training and Incentive Program (APTIP). Both schools submitted a grant application and NMSI conducted formal site visits and assessments to gauge focus, commitment, and potential success of APTIP. The APTIP was launched in 2010 in four schools and in the first year, the AP math, science and English scores increased 45 percent which was almost six times the national average.

“APTIP is equipping our students from military families to compete on the global stage,” said Gregg Fleisher, the National Director of APTIP for NMSI. He pointed out that research indicates that students passing AP courses in high school are three times more likely to complete a college degree. Further, AP students are among the few American students who compare favorably with their counterparts in other countries on internationally ranked math and science exams.

The goal of the APTIP program is to increase the number of students enrolled in math, science, and English Advanced Placement (AP) courses. In addition, the program is designed to increase the number of students receiving qualifying scores of three or greater on the AP exams. The four-tiered program incorporates teacher support (high quality, content-focused teacher training in addition to teacher mentoring and vertical teaming), student support (encouraging open enrollment and academic tutoring and study sessions), incentive awards (awards for student and teacher performance), and program management (employing expert teams and strong partners) as the proven elements of success.

“Boeing is proud to support the expansion of the National Math and Science Initiative’s Initiative for Military Families into the Aberdeen Proving Ground community,” said Waldo Carmona, director of Networked Tactical Intelligence, Surveillance and Reconnaissance for Boeing Defense, Space & Security. “This important program ensures that military family members from the community have access to enhanced educational opportunities, particularly in the areas of science and technology, as they prepare for college. Boeing is committed to supporting our nation’s military and their families here in Maryland and helping prepare the future workforce for careers in technology and innovation.”

When asked what this opportunity means for her school, Havre de Grace junior Monique Watson stated, “...I believe it will generate an excitement for coursework that will elevate our studies to the next level. Having this opportunity will give me the ability to accelerate my path to a college degree and give me a competitive edge moving forward that I may not have otherwise received. On behalf of our students, I want to thank NMSI, Boeing and DoDEA for investing in our futures.”

Specific goals for increased AP participation and qualifying scores have been set for both schools and the accountability piece will be tracked and assessed by NMSI at the conclusion of each of the next three school years. NMSI requires strict observance of the four program elements to ensure the success of the initiative.

“We know that participation in AP coursework gives our students the academic edge over others as they prepare for post-secondary education and futures beyond the classroom,” said Harford County Public Schools Superintendent Robert M. Tomback. “In order to provide the rigor and opportunity in STEM related fields, our Board of Education has identified increased AP participation and qualifying scores for all students as a focus through our strategic plan. We are excited and grateful that NMSI, Boeing and DoDEA will be providing the fiscal and academic resources to assist us in that endeavor for Aberdeen and Havre de Grace high schools, two of our high schools that are home to many students whose parents serve our country.”

About the Boeing Company: Boeing is the world’s largest aerospace company and leading manufacturer of commercial jetliners and defense, space and security systems. A top U.S. exporter, the company supports airlines and U.S. and allied government customers in 150 countries. Boeing products and tailored services include commercial and military aircraft, satellites, weapons, electronic and defense systems, launch systems, advanced information and communication systems, and performance-based logistics and training.

About APTIP: APTIP dramatically increases the performance of high school students in rigorous AP courses in math, science and English. The comprehensive approach includes intensive teacher training, support from master teachers, increased time on task for students in special study sessions, open enrollment, and incentives for teachers and students. Passing AP exam scores are almost universally accepted for course credit by the nation’s colleges and universities, which see success in AP courses as reliable indicators of students’ subject-area knowledge and capacity for college-level thinking.

About NMSI: NMSI is an agent of change that was launched in 2007 by top leaders in business, education and science to improve student achievement in math and science across the American public school system. NMSI’s mission is to bring best practices to the education sector by replicating proven programs on a national scale that have more than 10 years of proven results. NMSI has received major funding support for its groundbreaking national incentives from Exxon Mobil Corporation, the Bill and Melinda Gates Foundation, and the Michael and Susan Dell Foundation, with additional support from the Carnegie Corporation of New York.
